What is an Employee Security Awareness Program?

Above Security’s Awareness Program is a complete solution including an LMS (learning management system), assessment tool (quiz), online course, awareness tools (posters, ad banners, email templates, etc.) and newsletters.

The program is easy to use and presents the principles of information security, as well as the best practices related to it. This program allows users to understand and apply best practices with regards to information security. It emphasizes the importance of protecting confidential and strategic information.

Objectives of implementing a security awareness program

Your organization will be able to enhance the level of awareness of its employees in information security. Every year, new risks appear, and new vulnerabilities are identified. It is essential that the users obtain a minimum of general knowledge in information security, and will then avoid risky activities.

By acquainting your users with the threats and teaching them how to avoid them, you will minimize your organization’s operational risks and financial losses. In other words, you get a tangible return on your investment.

Benefits of an employees’ security awareness program

- Demonstrates the organization’s commitment to information security
- Contributes toward better operational risk management
- Provides a permanent, comprehensive, measurable, global approach which will impart a homogeneous level of knowledge throughout your organization
- It teaches best practices and creates/reinforces good information security habits
- It conforms to industry standards and laws (ISO 27001, Bill 198, Sarbanes Oxley, etc.)
- Reduces internal human risks that could cause important financial losses
- Offers cutting-edge content based on real-world scenarios and current issues
- Excellent way of integrating new employees into the company, as well as part-timers.

This is a turnkey solution that requires moderate efforts to implement.
Our pedagogic tools include:

- Employee handbook
- Executive Security Awareness Presentations
- Web based Quiz
- Learning management system
- Web based security awareness training
- Awareness tools (posters, ad banners, email templates, etc)
- Electronic Newsletter
